# INSPIRATION

The thought was quite simple as I wanted to create something practical and UX intensive which caters to the needs of the users .

So I thought why not create a online website store which can provide a better UX to the users.

# PROJECT VISION AND MISSION

The objective of this project was to provide a better UI/UX to the users .

# CREATION PROCESS

**01**

Creating the different components for the whole application in React using JSX.

**02**

Styling the components as needed by using Tailwind.

**03**

Installing dependencies and external libraries like React-Router, React-Redux-Toolkit, etc.

**04**

Creating different functions for the needed functionality of different components .

# TECH & SUB-TECHS

Page 06

## Front-End / Structure - **React**

React has been used for the development of this project.

React-Router and hooks like useState, useEffect and useReducer have been used.

## Styling - **Tailwind**

The complete styling has been done using Sassy Css.

The styling code seems very understandable due to the use of SCSS.

## Resources: **For Research**

React Router

Documentation

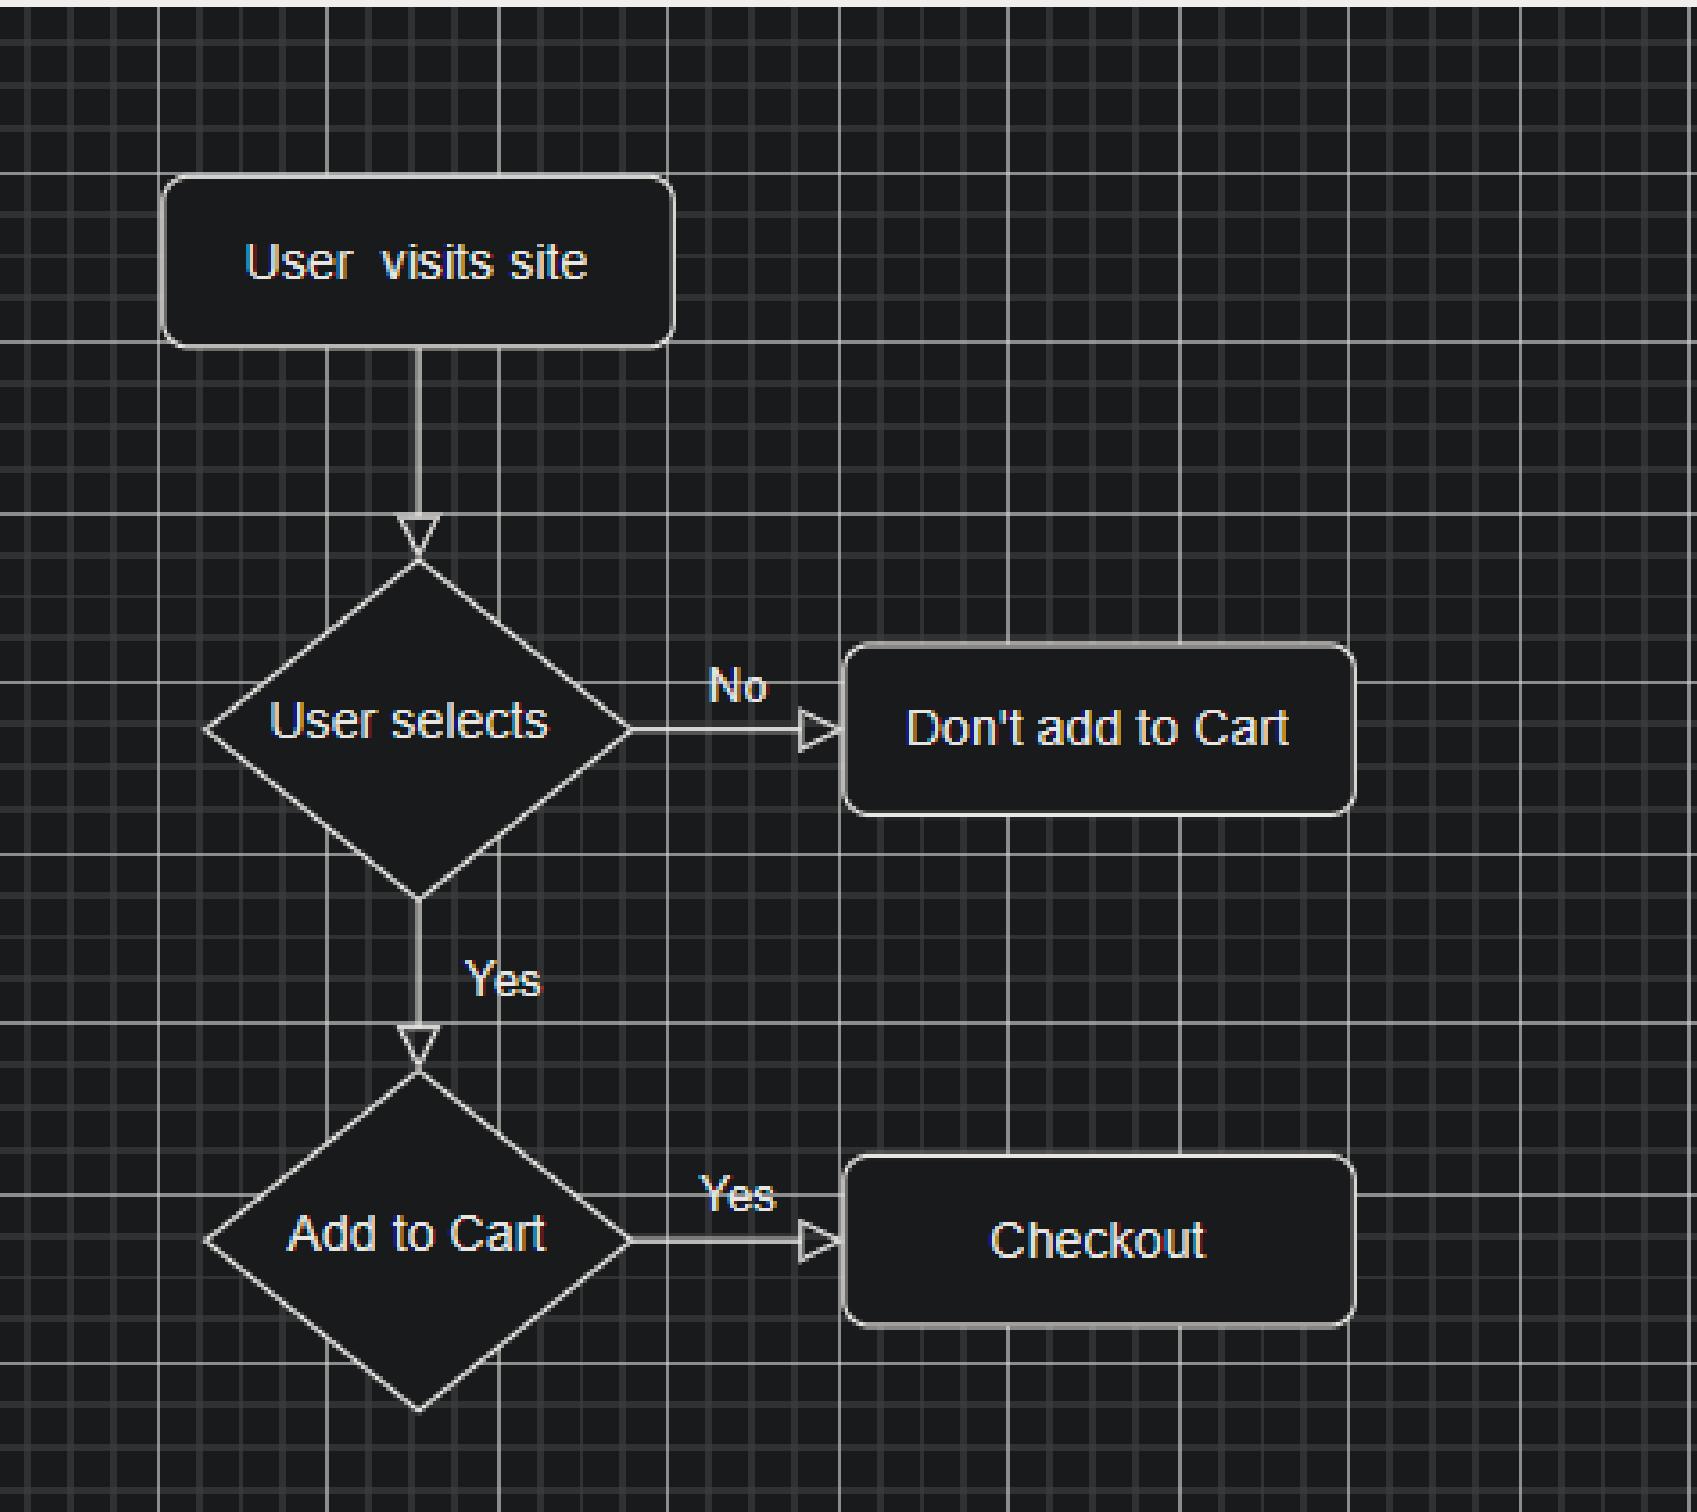

React.dev and some other websites.

Youtube Videos for some debugging.
