Introduction

Ecomzy is a shopping site that can be simply used to buy trendy clothes . With a clean and minimal UI , dear-chat serves the user with end to end encrypted messaging facility. Wiring up everything, you can say it's just a chatting app but the thing that differentiates it is that it can be used in a way you actually want to use it.

Objective
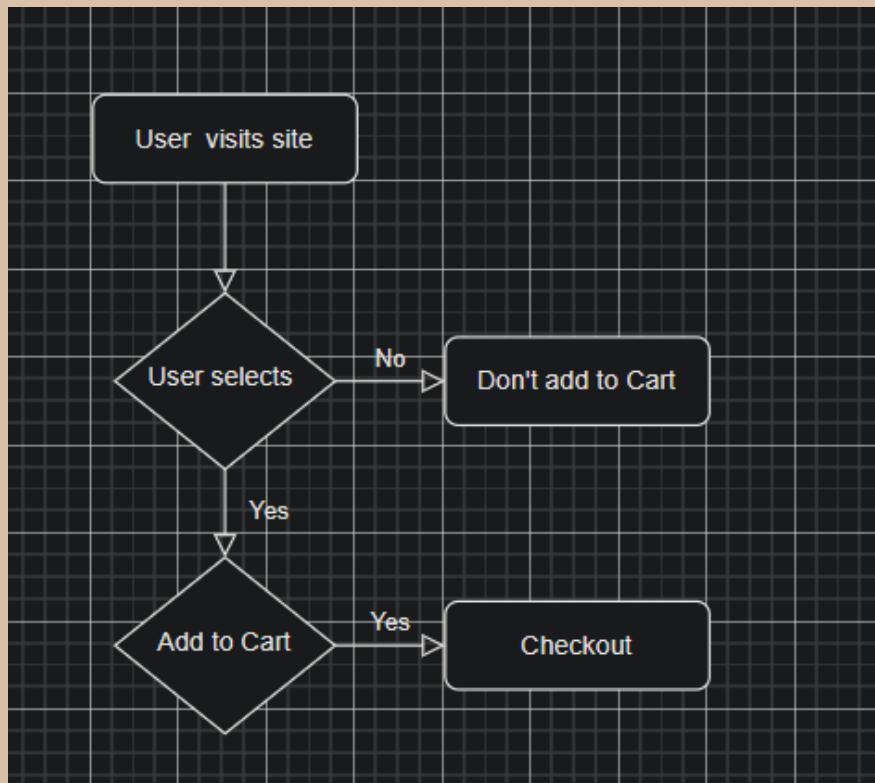

Creating the proccess of buying a bit easier.

Providing a clean and minimal user experience to the user and to the point solution for the purpose of buying.
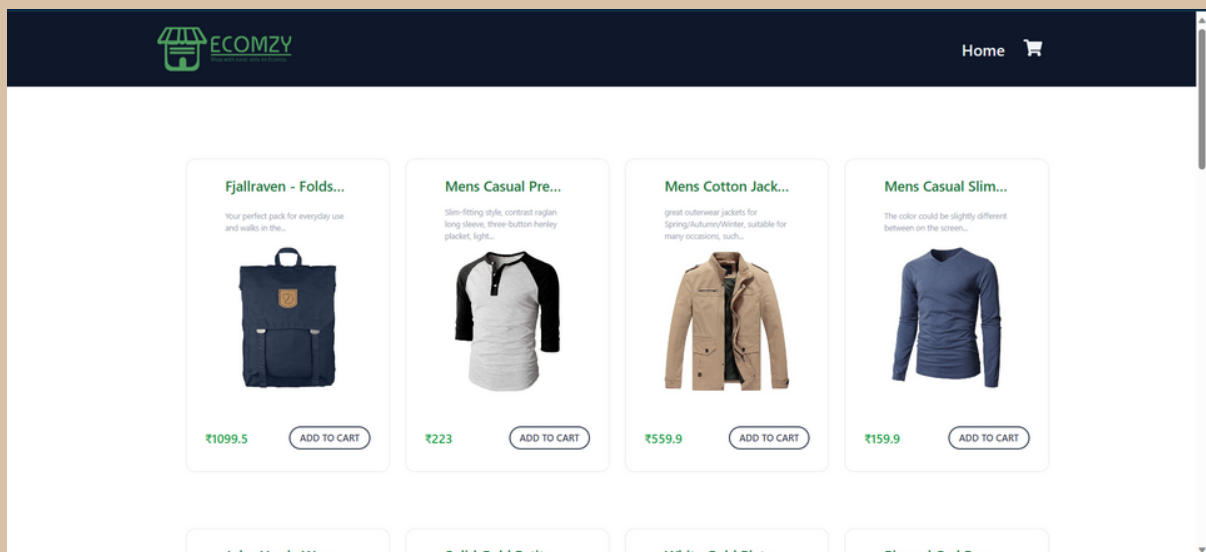

TechStackUsed

- **React-** I used React for the whole structure or you can say front-end of the web application so that things can be rendered fast and the react hooks made the whole development very easy.

- **Tailwind-** I used Tailwind for the designing part of the web application.The main reason behind using it is that it provides utility classes which are very useful.

- **Vercel Deployment-**I used Vercel to deploy the site as it was very easy and gave many features like insights and analytics for the shopping site which can be very useful for user management..
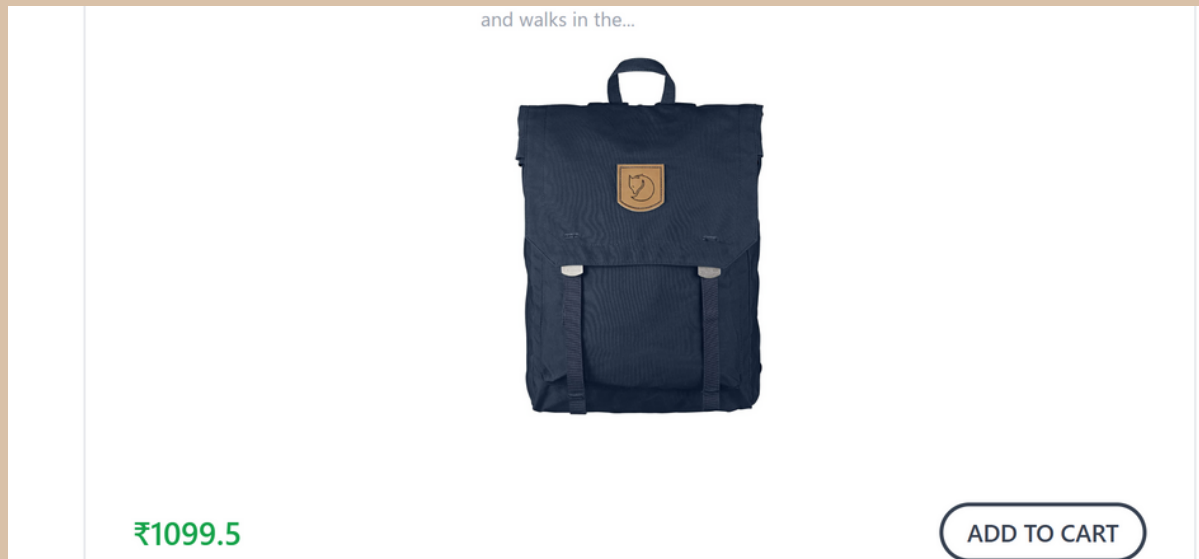

Project-Flow

The flow of the application is in the following way-

1) User visits https://ecomzy-app.vercel.app/ and they willl enter the home page

2) Users can add the desired product to the Cart and then they can go to cart and see the total amount .
